ENERGY-EFFICIENT EQUIPMENT REBATES FOR INDUSTRY
ENERGY-SAVING IMPROVEMENTS PRODUCE MONEY-SAVING RESULTS

Manufacturing businesses are vital to Oregon’s economy. They provide jobs in communities throughout the state and sell products worldwide. To compete and thrive, these industries have to operate efficiently in every way.

Energy Trust of Oregon makes it simple to receive cash back when you install new, energy-efficient equipment. Not only do you save money and energy, but the upgrades can enhance your business environment for customers and employees, reduce your carbon footprint and improve production.

For anything you would typically buy through a vendor—from simple do-it-yourself measures to more complex equipment upgrades—Energy Trust likely provides a rebate or incentive for energy-efficient options. All you have to do is ask your vendor. For many companies, cash incentives and rebates are the deciding factor in making the investment in improvements now.
OREGON IS OUR BUSINESS

Energy Trust supports Oregon industries of all types, including:

- Breweries
- Building products
- Cold storage and distribution
- Food processing
- Landfills
- Manufacturing
- Metal fabrication
- Pulp and paper
- Warehouses
- Water and wastewater treatment
- Wineries
- Wood Products
No business is too big or too small to benefit from energy-efficiency improvements. Energy Trust makes it convenient. You have freedom to work with the vendor of your choice to develop a solution that meets your needs and qualifies for incentives. Typically, the vendor supplies information related to your purchase to Energy Trust, and may also help you fill out the application form. Once the project is complete, your last step is to deposit the incentive check from Energy Trust and enjoy the benefits of your investment.

For a list of Energy Trust trade ally vendors in your area who are familiar with the upgrades eligible for incentives, visit www.energytrust.org/industrial-and-ag, or call 503.928.3154.

If you don’t see your preferred vendor on the list, ask them to contact Energy Trust to get the project started for you.
ENERGY TRUST INCENTIVES

Most operations have opportunities for energy-efficiency upgrades. To identify those that qualify and to receive your incentives, follow these steps:

• Before you purchase equipment, ask your vendor to begin the application process.
• Once the upgrade is installed, you or your vendor will contact Energy Trust.
• Receive your incentive check in four to six weeks.

Incentives are based on the estimated annual energy savings of the project. The incentive equals $0.25 per annual kilowatt-hour or $2.00 per annual therm saved, or up to 50 percent of the project’s eligible installation cost.

Incentives are available for:

• Compressed air systems
• Controls
• Direct contact water heaters
• Dust collection baghouse gates and controls
• High-speed doors for refrigerated storage and docks
• HVLS fans (high volume low speed)
• Hydraulic pump applications
• Hydraulic system improvements
• Refrigeration
• Variable-frequency drives on pumps and fans
• Welders
• Other energy-saving projects
ENERGY TRUST REBATES

You may be eligible for rebates on qualified purchases. The process is simple:

• After you purchase qualifying equipment fill out the rebate form provided by your vendor.
• Attach invoices and any product information, as noted on the Energy Trust rebate form.
• Send it to the Energy Trust address on the rebate form and receive your check in four to six weeks.

Rebates are available for:

Compressed air equipment:
• Additional receiver capacity
• Cycling refrigerated dryers
• Low-pressure drop filters
• Zero-loss condensate drains

Insulation:
• Attic, roof and wall
• Hot water and steam pipes
• Wine tanks

Heating and cooling:
• Air conditioning
• Boiler vent dampers
• Heat pumps
• HVAC unit heaters
• Radiant heaters
• Warm air furnaces
• Water heaters
Energy Trust incentives were a vital element in our project investment.
